AI Search Readiness

79 AI readiness
79/100

How easily AI answer engines such as ChatGPT, Gemini and Perplexity can crawl, understand and cite this page. Every item below is measured on your site.

Quick wins

3

- Single descriptive H1:** No H1 found. AI engines lean on it to summarise the page.
- llms.txt file:** No /llms.txt found. Adding one helps AI engines pick the right pages to cite.
- Meta description:** No usable meta description, so engines will invent their own summary.

How this score works

We measure what AI answer engines can actually see on your site: whether your robots.txt allows GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot, Google-Extended and CCBot, whether an llms.txt exists, plus JSON-LD schema, a single H1, meta description, canonical URL, indexability, content depth, Open Graph tags and a declared language. Each item is weighted, and a warning counts as half credit.

What we do not claim: we do not estimate how often ChatGPT, Gemini or Perplexity mention your brand. That cannot be measured without querying those models, so we do not publish a number for it.

✓ AI crawler access

Congratulations! Your robots.txt does not block any major AI crawler.

Keywords

It is unlikely that there is a specific keyword density that is optimal for search engines (as their algorithms have evolved beyond using keyword density as a ranking factor). However, it can be helpful to see which keywords are most commonly used on your page and whether they accurately reflect the intended topic. More importantly, the keywords on your page should be used naturally and in grammatically correct copy.
