Title	SmartLink Services Smart solutions for a smarter world
Url	http://smartlink.services/
Description	SmartLink Services: ERP, data and AI systems that actually go live. Enterprise software delivery from Karachi.

AI Search Readiness

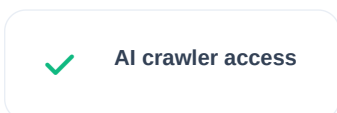

How easily AI answer engines such as ChatGPT, Gemini and Perplexity can crawl, understand and cite this page. Every item below is measured on your site.

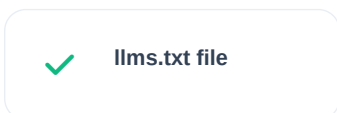

How this score works

We measure what AI answer engines can actually see on your site: whether your robots.txt allows GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot, Google-Extended and CCBot, whether an llms.txt exists, plus JSON-LD schema, a single H1, meta description, canonical URL, indexability, content depth, Open Graph tags and a declared language. Each item is weighted, and a warning counts as half credit.

What we do not claim: we do not estimate how often ChatGPT, Gemini or Perplexity mention your brand. That cannot be measured without querying those models, so we do not publish a number for it.

Congratulations! Your robots.txt does not block any major AI crawler.

Congratulations! Found /llms.txt, a plain text guide to your key pages for AI tools that read it.

✓ Structured data (JSON-LD)	Congratulations! Found 2 JSON-LD block(s). AI engines use this to identify your entity.
✓ Single descriptive H1	Congratulations! Exactly one H1, which clearly states the page topic.
✓ Meta description	Congratulations! A meta description is present for AI engines to summarise.
✓ Canonical URL	Congratulations! A canonical URL is declared, so citations point at one address.
✓ Indexable (no noindex)	Congratulations! The page is indexable.
✓ Content depth	Congratulations! The page has about 3351 words of visible text. AI engines prefer substantive pages they can quote.
✓ Open Graph tags	Congratulations! Open Graph title and description are present.
✓ Declared language	Congratulations! The page declares its language.

Most Common Keywords

It is unlikely that there is a specific keyword density that is optimal for search engines (as their algorithms have evolved beyond using keyword density as a ranking factor). However, it can be helpful to see which keywords are most commonly used on your page and whether they accurately reflect the intended topic. More importantly, the keywords on your page should be used naturally and in grammatically correct copy.
